

Policies of Indian Journal of Biological Sciences

Publication policy

The articles are selected for publication on the basis of quality and compatibility of the paper with the aims of the journal. The journal ensures a rapid and transparent editorial process. It adopts the following policies for publication of articles:

a. Peer-review policy:

Peer-review is the process used to assess the quality of a manuscript before it is published. Independent researchers in the related research area assess submitted manuscripts for novelty, strength and significance to help editors decide whether the manuscript should be published in their journal.

The Journal runs a double-blind peer-review system, where the reviewers are not aware of the names and affiliations of the authors and the reviewer reports provided to authors are anonymous.

b. Editorial policy:

The journal remains neutral with regard to jurisdictional declarations in published maps and institutional affiliations.

c. Ethics Policy:

Ethics topics to consider when publishing in the Journal:

Authorship of the paper: Authorship should be restricted to those who have made a significant input to the conception, design, implementation, or interpretation of the reported study.

Originality and plagiarism: The authors should guarantee that they have written completely original works, and if the authors have used the work and/or words of others that this has been properly cited or quoted.

Multiple, redundant or concurrent publication: An author should not in general publish manuscripts describing basically the identical research in more than one journal or primary publication.

Acknowledgement of sources: Proper acknowledgment.

Disclosure and conflicts of interest: All submissions must include revelation of all relationships that could be observed as presenting a potential conflict of interest.

Fundamental errors in published works: When an author discovers a significant error in his/her own published work, it is the author's responsibility to rapidly inform the journal editor and help with the editor to correct the paper.

Hazards and human or animal subjects: Statements of conformity are required if the work engages chemicals, procedures or equipment that has any remarkable hazards inherent in their use, or if it involves the use of animal or human subjects.

Use of patient images or case details: Studies on patients or volunteers require ethical committee approval and informed consent, which should be documented properly in the paper.

Authors must ensure that

- Their work is original
- Must not have been published elsewhere
- Other authors, contributors or sources should be appropriately credited
- They are responsible for language editing before submission
- Their work has not been copied or plagiarized in whole or part from any other work
